Trace  Metal®

**Protecting your clients
against metal theft**

**Why Join the Trace-in-Metal
Installer Network?**

1. **Trace-in-Metal** helps you provide a more comprehensive service to your clients by...
 - Creating a credible deterrent against theft - raising the risk of arrest - not only to the front-line thieves - but also to those subsequently dealing in the stolen metal.
 - Strengthening your identification with clients' desires to maintain heritage and listed buildings in their original form
2. **Trace-in-Metal** reinforces your 'niche' position as a specialist lead roofing contractor
3. **Trace-in-Metal** helps link the identity of your business with heritage and traditional materials
4. **Trace-in-Metal** means additional income and profits.

METAL
THEFT
DOWN!

Ten Reasons why Trace-in-Metal is the 'Complete Solution'

1. Tiny nickel microdots are fused with the lead, using Trace-in-Metal's patented ballistic technology and are undetectable by thieves
2. Refiners and police are equipped to recover and read the Trace-in-Metal microdots
3. Trace-in-Metal microdots survive melting so that refiners and smelters can refuse deliveries that have passed through from rogue metal traders
4. To assist police, Trace-in-Metal microdots are also painted onto the surface of each sheet of lead using an all-weather lacquer that shows under ultraviolet light
5. A weather-resistant marker is also used to mark the premises' post code
6. 24/7 access to online database by Police, Customs and Tax Authorities via Immobilise*
7. Deterrent signage informs thieves of the risk of taking the metal from Trace-in-Metal premises
8. Trace-in-Metal provides police compliant witness statements and victim impact statements
9. Automatic alerts of local neighbourhood policing teams and licensed Scrap Metal Dealers following theft using social network sites and cascading emails
10. Trace-in-Metal's unique technology provides local police and enforcement agencies with a quick and easy means of tracing metal back to source
